Journal of Neuroscience Methods, 43 (1992) 237–238
Elsevier Science Publishers B.V.

Contents of Volume 43

Number 1 – June 1992

Research papers

Method of analysis of local neuronal circuits in the vertebrate central nervous system
S. Reinis, D.S. Weiss, S. McGaraughty and J. Tsoukatos (Canada) 1
Single-channel and whole-cell recordings from non-dissociated sympathetic neurones in rabbit coeliac ganglia
M. Gola, J.-P. Niel, R. Bessone and R. Fayolle (France) 13
Data processing for multi-channel optical recording: action potential detection by neural network
S. Yamada, H. Kage, M. Nakashima, S. Shiono and M. Maeda (Japan) 23
Push–pull cannula for localized application of drugs and sampling of medium, combined with electrophysiological recordings in an interface slice chamber
D.C. West, A.M. Thomson and K.Q. Do (UK, Switzerland) 35
Gelatin embedding to preserve lesion-damaged hypothalami and intracerebroventricular grafts for vibratome slicing and immunocytochemistry
H.A. Griffioen, E. Van der Beek and G.J. Boer (Netherlands) 43
Cholinesterase histochemistry in the human brain: effect of various fixation and storage conditions
M.A. Morán and P. Gómez-Ramos (Spain) 49
A computerized 2-dimensional vibrating probe for mapping extracellular current patterns
K.B. Hotary, R. Nuccitelli and K.R. Robinson (USA) 55
The detection of changes in psychological state using a novel pharmacological conditioning procedure
M.P. Carey, J.P. Fry and D.G. White (UK) 69
A non-contact system for 2-dimensional trajectory recording
C. Urquizar and D. Pelisson (France) 77

Numbers 2,3 – July 1992

Research papers

NeuronC: a computational language for investigating functional architecture of neural circuits
R.G. Smith (USA) 83
Continuous scan cyclic voltammetry (CSCV): a new high-speed electrochemical method for monitoring neuronal dopamine release
J. Millar, J.J. O'Connor, S.J. Trout and Z.L. Kruk (UK) 109
Intracellular recording from dopamine neurons in the substantia nigra: double labelling for identification of projection site and morphological features
T.H. Lee, E.H. Ellinwood, Jr. and G. Einstein (USA) 119
The combined EEG–intracerebral microdialysis technique: a new tool for neuropharmacological studies on freely behaving animals
N. Ludvig, P.K. Mishra, Q.S. Yan, S.M. Lasley, R.L. Burger and P.C. Jobe (USA) 129
Extracellular perfusion controller for electrophysiology
J.R. Stimers (USA) 139
A simple, highly sensitive assay for measurement of digitonin during receptor solubilization
B.W. Moore, A.L. Giordano, M. Bruckner and B. Nock (USA) 153
A new procedure for multiple intraretinal transplantation into mammalian eyes
E. Lazar and M. Del Cerro (USA) 157
The playground maze: a new method for measuring directed exploration in the rat
B. Nicholls, A. Springham and J. Mellanby (UK) 171

Construction of a microdialysis probe with attached microinjection catheter
E.P. Frothingham and A.I. Basbaum (USA) 183
Properties of endogenous voltage-dependent sodium currents in *Xenopus laevis* oocytes
D.S. Krafte and W.A. Volberg (USA) 189
Quantitative analysis of reflex responses in the averaged surface electromyogram
A.V. Poliakov and T.S. Miles (Australia) 195
Modeling of the quantal release at interneuronal synapses: analysis of permissible values of model moments
A.E. Dityatev, V.M. Kozhanov and S.O. Gapanovich (Russia) 201
Monitoring neuronal activity during discrete behaviors: a crawling, swimming and shortening device for tethered leeches
A.P. Baader and W.B. Kristan, Jr. (USA) 215
A simple and rapid method for improving recording characteristics using multibarrelled micropipettes
G. Scott and R. Mason (UK) 225

Corrigendum
A simple quantitative dotimmunobinding assay for glial and neuronal marker proteins in SDS-solubilized brain tissue extracts, *J. Neurosci. Methods*, 33 (1991) 219–227
S. Wang, L.E. Rosengren, J.-E. Karlsson, T. Stigbrand and K.G. Haglid 231
